SWAAD ON FOOD DELIVERY APP

THREE EASY STEPS

Browse the menu & order directly from the application

Your order will be immediately collected & sent by delivery boys

Pick up delivery at your door & enjoy groceries
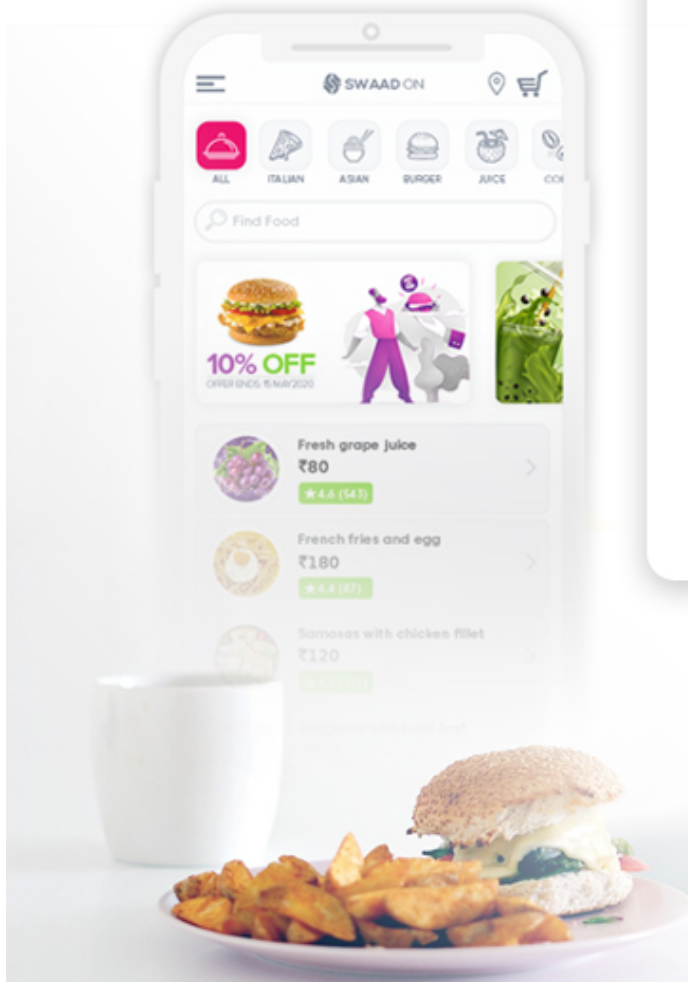

QUICK FOOD DELIVERY IN YOUR MOBILE

INTRODUCTION

The purpose of this project is to develop an online food ordering and delivery system. It is a system that enables customers to place their order online at any time and deliver it at the comfort of their homes or work place. The reason to develop the system is due to the issues facing the food industry.

It reduces the time management of people because if we need something like breakfast , lunch , dinner , etc to buy those things we need to go to a hotel , but if that is difficult for the people to do so then people can use the mobile application. Implementation of a mobile application will allow users to order food online from different restaurants and get delivery services.This is made possible using an electronic payment system.

Our project gives ideas about the hotel and food which is better among all those things. In this we can gather all information about the hotels to order anything and we can easily get the location of the hotel. Customers can order anything whatever they wish through convenient payment mode.

WHY SWAADON ?

Our idea is to design and make an Online Mobile Application for Food Ordering and Delivery Online. Mobile Application for Food Ordering and Delivery will be used by anyone who is connected to the internet and it will help customers to order food from different restaurants using only one application. Users will download the mobile application, create an account and use the app during working hours.

In this application, the customers will be able to view the name and the pictures of the food items as well as prices and deals of the day, offers and updated menus because sometimes when the customer calls to make an order he or she might not know the name of the food item she or he actually wants and has to ask for brief description which is a waste of time.

This application will make it possible for the user to see the status of the food, meaning the user will be able to know how far the food is from being ready and being delivered.

Payments can be done via payment gateways on this application or can be done when the delivery man delivers the food.

SWAAD ON
SWAAD ON FOOD DELIVERY APP

SwaadOn helps users to register and order their favourite food at your door steps.

INSTALL SWAADON APPLICATION
Enable people to install the application on their smartphones.

FOOD CATEGORIES
To allow users to view the food catalogue and search for food items.
